Supplemental Election / Restriction Requirement

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a stable agricultural solids suspension readily dispersible in water, classified in class 504, subclass 142.
- II. Claims 21-23,25-38, drawn to a water soluble, stable agricultural solids suspension readily dispersible in water, classified in class 504, subclass 206.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as an internal use rather than agricultural use. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Art Unit: 1616

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Response to Applicant arguments

Applicant argues that claims 1-18,21-23,25-38 together are linked to from a single inventive concept which should be examined together. Applicant argues that on February 3, 2006, all of the claims were already examined together without restriction requirement. Examiner disagrees with Applicant. Prior to February 3, 2006, Applicant did not make claim to a water soluble, stable agricultural solids suspension readily dispersible in water but rather to a stable agricultural solids suspension readily dispersible in water. Note a reference to a stable agricultural solids suspension readily dispersible in water may not read on a water soluble, stable agricultural solids suspension readily dispersible in water. For this reason the restriction / election is required. Note that invention I only requires that solids be water dispersible, whereas, invention II requires that agricultural solids be water-soluble.

Acknowledgement of Election Made

Examiner acknowledges election of composition comprising ammonium sulfate, dodecylphenoxy poly(ethylene oxide)9.5-11 ethanol, propylene glycol and methylthio-alpha-hydroxybutyric acid and composition comprising ammonium sulfate, dodecylphenoxy poly(ethylene oxide)9.5-11 ethanol, propylene glycol and isopropylamine salt of N-(phosphonomethyl)glycine.

Telephonic Inquiry

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
